**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11/8/06 has been entered.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 9, 13, 17, 22, 30-32, 34, 38, 40, 42, and 46-48, are rejected under 35 U.S.C. 102(b) as being anticipated by Kelman (UPSN 4,174,553).

With reference to Figure 2 Kelman discloses an intraocular lens comprising a single optic 34 having anterior and posterior sides and multiple plate haptics 40 and 42 extending from the edge of the optic. The haptics have a thinner portion 44 adjacent the optic that enables the optic to move anteriorly and posteriorly. In Figure 2 the lateral edges of haptics are parallel to one another. Kelman further discloses protuberances 50 and 52 that extend laterally from the haptics.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 10-12, 14, 21, 25-27, 33, 35-37, 39, 41, 43-45, 49, are rejected under 35 U.S.C. 103(a) as being unpatentable over Kelman (USPN 4,174,553) in view of Schlegel (USPN 4,673,406).

Kelman discloses the intraocular lens as described above however Kelman fails to disclose protuberances extending from a surface of the haptic in anterior and posterior directions and the use of a biconvex optic.

With reference to Figures 8, 11, and 12, Schlegel teaches an intraocular lens comprising an biconvex optic 11, two haptic members 14, each having two protuberances 15 separated by a notch 16, that extend anteriorly, posteriorly, and laterally away from haptics 14 to aid stable fixation of the intraocular lens and prevent rotation within the eye (2:52-63).

Therefore in view of the teachings it would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified the intraocular lens disclosed by Kelman by using a biconvex lens and adding the anterior and posterior extending protuberances as taught by Schlegel in order to provide increased fixation of the intraocular lens within the eye thereby preventing rotation.

***Response to Arguments***

Applicant's arguments with respect to all claims have been considered but are moot in view of the new ground(s) of rejection.

***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher D. Prone whose telephone number is (571) 272-6085. The examiner can normally be reached on Monday Through Fri 8:30 to 5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Corrine McDermott can be reached on (571) 272-4754. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
